 Objective

Results-oriented Computer Science and Engineering student with hands-on experience in Java, Python, and cloud platforms. Passionate about building scalable, real-world solutions and seeking a challenging role to apply technical skills in software development or cloud computing.

 Education

Bachelor Of Engineering (CSE)	2023 – 2027
V.S.B College Of Engineering Technical Campus	
CGPA: 8.71 (upto 6th sem)	
Higher Secondary	2022 – 2023
Isha Vidhya Matric.Hr Secondary School	
Percentage: 82.1%	

 Skills

Programming Languages Java, Python	Core Concepts Data Structures & Algorithms (DSA), Object-Oriented Programming (OOP) , Blockchain	Database & Cloud Technologies Oracle MySQL , Oracle Integration Cloud (OIC)
Developer Tools & Platforms GitHub,Git,Render		

 Internship

Cloud Intern, Codec Tech	07/2025
• Worked on cloud fundamentals and services • Deployed basic applications on cloud platforms • Assisted in monitoring and optimizing resources.	
JAVA Developer, CodeAlpha Tech	03/2024
• Built Java applications using OOP concepts • Integrated MySQL for database operations • Tested and debugged code for performance	

 PATENT

Hybrinox - Smart fuel switching for hybrid vehicles , Patent number : 202541016688a
• Developed an IoT-based smart fuel switching system for hybrid vehicles. • Designed automated switching between electric and fuel modes for improved efficiency. • Built sensor-driven control logic for optimized energy management.

Project

Multilingual Ticket Translator

AI-Powered Bidirectional Support Ticket Translation System

Tech Stack: Python, Flask, SQLite, HTML/CSS/JavaScript, Google Translate API, GitHub

- Built an AI-assisted multilingual support ticket translation system for 20+ languages.
- Implemented automatic language detection and bidirectional translation.
- Developed a Glossary Protection System to preserve technical terms.
- Enabled accurate multilingual communication between customers and support engineers.

SkincertChain

Blockchain Certificate Verification Tool

Tech Stack: Solidity, Ethereum Blockchain, Python, Flask, HTML, CSS, JavaScript, Git, GitHub

- Built a decentralized certificate verification system using Ethereum smart contracts to eliminate credential fraud.
- Stored certificate hashes on-chain, ensuring tamper-proof and immutable records.
- Developed smart contracts in Solidity for automated certificate issuance and revocation
- Enabled trustless verification — no central authority needed to confirm credential validity.

Achievements

Blockchain Course Publication

Published a blockchain course on Graphy to simplify and share blockchain concepts with learners.

Student Mentorship

Mentored students through Topmate, improving leadership, communication, and technical guidance skills.

Certifications

Deolitte

Technology Job Simulation

Wibro

Data Science

InfosysSpringBoard

Foundation of Java
